

SUMMARY

Jones-Steisel House

circa 1928

623 Anneslie Road

Suburb of Anneslie, Towson, Maryland

Private

The one-story, stucco bungalow is a good example of the type of single-family dwellings which were being built in suburban developments throughout much of the country after World War I. Constructed circa 1928, the house and its surrounding landscaping retain much of their original appearance, minor alterations being made to the exterior. The roof covering has been replaced, as have the wood sash windows, and the buff-colored stucco is now painted white. The original floor plan of the main floor remains. It comprises a living room, dining room, kitchen, two bedrooms, and a bathroom. The kitchen was completely modernized in the 1950s. A number of the decorative details of the interior are extant. Wall-to-wall carpeting covers the hardwood floor in the living room, dining room, and bedrooms.

At one side of the rear of the property is the original two-door, stucco garage.

Section 7: Description of Resource and Its Various Elements

The single-family dwelling at 623 Anneslie Road is a detached, one-story, asymmetrical, stucco bungalow situated on the south side of Anneslie Road (Lots # 23 and 24, Block "O" on a Plat of Anneslie; combined frontage of 50' and an even rectangular depth of 125'). Built on a concrete block foundation, the balloon-framed structure has an irregular plan, three rooms deep, and a low-pitch, cross-gabled roof with slightly overhanging eaves. Although its former owners have altered some of the original exterior features over the years — such as modifying the brick steps and railing of the front porch, painting the buff-colored stucco walls green and then white, and replacing the red asbestos shingles and all the double-hung wood sash windows — the building nevertheless retains very much of its overall appearance when it was built in the mid-to-late 1920s. In addition, the nature of the landscaping, siting of the concrete front walk, and presence of the stucco-covered garage at the south-west end of the property all contribute to the retention of the original appearance.

The bungalow's north (main) facade is two bays wide, the most prominent feature being the full-height main entry porch which projects from the west bay and creates the cross-gable. The stucco porch has its original concrete floor and steep pitch gable roof, now covered with asphalt shingles. Four square columns support the roof and define the front facade of the porch. Two columns, centered over the brick steps, rise to form a round arch. Wrought iron railing forms the balustrades on the west and east facade of the porch, as well as the curved handrail leading down from the top of the steps. Centered in the porch is the main entry, consisting of a single, glass paneled door which dates from the construction of the building. With respect to the west bay of the north facade, two 1/1 windows, each with a wood shutter, are centered in the bay.

The east facade consists of two bays and a wing. Projecting slightly from the main block is the exterior gable wall chimney, with its two chimney pots, flanked by two 1/1 windows of the living room, located at either side of the chimney. These were originally casement windows. The wing, which is south of the main block, is built on sloping ground, giving a raised foundation. The wing consists of two 1/1 windows, one illuminating the dining room and kitchen, respectively, and two, three-light, awning windows which provide natural light in the basement.

Section 7: Description of Resource and Its Various Elements

The west facade of the building is three bays wide. The main block, which projects slightly from the wing, has one, three-light, basement awning window and one 1/1 window centered on the main floor. The southern two bays have two, 1/1 windows and one, three-light, basement awning window.

The south facade (rear) is three bays wide, consisting of the southern side of the wing and one bay of the main block. The east two bays, the most dominant feature of the facade, projects the rear of the kitchen out from the west side of the house. This projection at main floor level, supported in part by a squared pier towards the west side of the bay, serves to provide an enclosure for outdoor activities at ground level, including direct access to the basement by a single, inner wood door. At the western side of the east bay is a small enclosed porch, immediately adjacent to the kitchen. Fenestration includes one, three-light, basement awning window and a 1/1 window at main floor level. The west bay of the facade comprises wood steps and handrail leading from the small porch to ground level. At main floor level of the main block is one 1/1 window.

Interior

The original floor plan has been retained, as have a number of the decorative details. A living room, dining room, kitchen, two bedrooms, and a bathroom comprise the main floor. On the east side of the house, proceeding from north (entry door) to the south, are the living room, dining room and kitchen. The rooms are not separated by doors. On the west side, the bathroom is centrally located between the master bedroom to the north and the second bedroom to the south. At the rear of the kitchen, in the southwest corner of the house, is the wood stair which leads to the basement. Adjacent to the top of the stair is the rear door of the house, providing access to the garden and garage via an outdoor porch and stair.

The living room, measuring 15' 4" x 12' 6", is the largest room on the main floor. The original brick fireplace and red tiled hearth, centered on the east wall, are extant. The fireplace, once open, is now covered with a metal and glass firescreen. The room is

Section 7: Description of Resource and Its Various Elements

fenestrated with four windows, one on either side of both the fireplace and the front entry door, respectively. A lighting fixture which was once installed in the center of the ceiling has now been removed. As with the dining room and two bedrooms, the original tongue-in-groove hardwood floor of the living room is covered over with wall-to-wall carpeting.

The dining room, providing direct access to both the living room and kitchen, as well to the small hall leading to the bedrooms and bathroom, functions as a focal point in the house. The room is fenestrated with a single window centered on the east wall. The original molded chair rail remains, and it is possible that the metal chandelier with five glass shades is original. The kitchen, modernized completely in the 1950s, possessed a breakfast nook at the rear of the room, porcelain gas range, enameled sink, and large pantry. The original fenestration remains, however, with one window present on both the east and south walls, respectively.

The master bedroom has a large closet occupying virtually all of the south wall of the room. Two windows are centered on the north wall and one window is centered on the west wall. The etched glass ceiling fixture may be the original. The second bedroom has a smaller closet adjacent in the north-east corner of the room, and windows centered on the west and south walls, respectively. In the bathroom, the built-in tub and white ceramic tiling have been retained. The original chrome-plated plumbing fixtures have been replaced. The room has a window centered on the west wall.

The basement, which is now subdivided into three rooms, previously contained a large coal bin and steam heating plant designed to provide steam heat to radiators throughout the house. A newly installed split system heat pump is now utilized for heating, air-cooling and ventilation. The attic consists of a crawl space. Access to the attic is by means of a small ceiling door on the main floor of the house.

At the rear of the property is the yard and two-car stucco garage, with flat roof. Each car entry consists of two glass and panel doors. The concrete driveway leading to the garage is separated from the yard by a wood picket fence.

623 ANNESLIE ROAD, TOWSON, MD

Section 8: Statement of Significance, History, and Support

The dwelling is a good example of bungalow design and construction, built subsequent to World War I for a single-family who most probably wished to leave the city center in order to own an affordable home with a yard and garage. The building, situated in the suburb of Anneslie immediately north of Baltimore City, was among the group of seven houses illustrated and described in a promotional brochure published in 1929 by Charles H. Steffey, Inc.¹ The real estate firm constructed the houses in Anneslie for speculation during the 1920s. The one-story, stucco bungalow retains many of its original exterior and interior features.

The land on which the house was built formed part of the Anneslie estate. Anneslie was one of a line of estates which extended from Waverly to Towson. The focal point of the 100-acre estate, Villa Anneslie, was built by Frederick Harrison in 1855, who named the building after his daughter, Anne. The estate, which was originally purchased from the Govane Howard family, eventually became the property of the Birckhead family, descendants of Frederick Harrison. Lennox Birckhead sold off most of the land to Charles Steffey in 1922. Steffey divided the land into building lots and began constructing single-family suburban homes on the lots during the same year. By 1929, the date of the above-mentioned brochure, over 160 "cottage-type" houses had been built. The brochure noted that all the homes have water, gas, electricity, sidewalks, fire plugs, and street lights. The proximity to major roads and public transportation, stores, churches, and schools also was mentioned.

The house has been occupied by three sets of owners. First, Mr. Dana Sampson and his wife, Colby Sampson, owned the house from 1928-1940.² The house was purchased in 1940 by Mr. H. Earle Hudgins and Mrs. R. Norine Hudgins, who eventually sold it in 1989.³ The current occupants are Mr. William Jones and Mrs. Claudine S. Jones.
